

# Power to the speaker.

# Power to the installer.

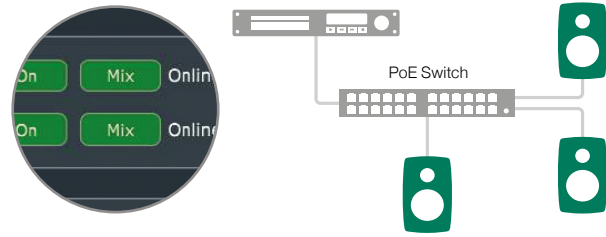

## Singular sound. Singular solution.

Genelec has created a Smart IP solution that will save professional audio system designers, integrators and installers valuable time - without sacrificing Genelec's renowned audio quality - and help them take on bigger audio installation projects.

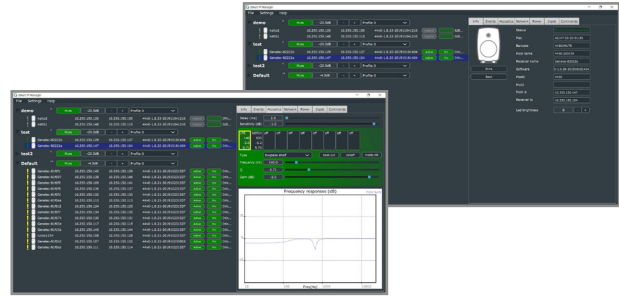

## connections

A single CAT cable delivers power, speaker management and AoIP using standard Dante or AES67 networking. Simply configure using Dante controller. You can use analogue audio simultaneously, mixing the inputs or acting as a failover.

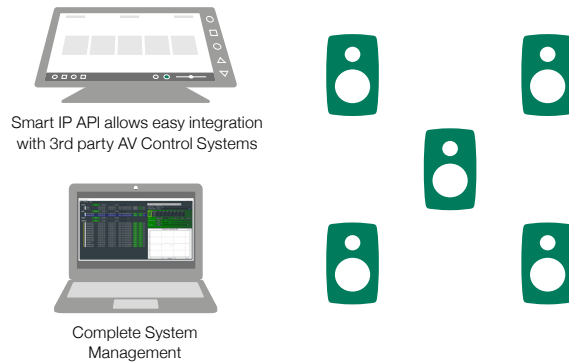

## system calibration

With our easy to use Smart IP Manager software, set up is simple. Get full access to DSP for room equalisation and delay, along with zone assignment and IP configuration. Audio for AV has never been more powerful or intuitive.

## system management and control

Manage Smart IP loudspeakers from a single screen. Divide your system into an almost unlimited number of rooms, zones, speakers or audio channels. Smart IP loudspeakers can be controlled easily from any AV control system.

available in **120 RAL colours**

huge range of mounting **accessories**

**For a complete IP audio system or analogue audio under IP control**
